In the new report you will learn: Which cites Clearwire plans to launch more WiMax services in this year, including Chicago, Seattle, Philadelphia and Dallas/Fort Worth What the technology called WiMax is, and how it differs from home broadband services like DSL and cable modem, or cellular wireless data networks like those used by the Apple iPhone 3GS How WiMaxs ability to keep users connected while mobile might empower new local nomads who want to take their Internet connectivity with them from home, to work and on their commutes How new pricing plans that include day passes and single bills for combined home and mobile services could help consumers lower their Internet access costs The report also takes a look at the devices currently offered to connect to WiMax networks, and what the future might hold should WiMax connectivity find its way into consumer electronics or even automobiles.
